

Finesse

Fine Pewter Hardware

naturally Pewter

2020
Door Hardware

The premium brand of the
DJH Group 'Finesse
Design' is celebrating
20 years of producing
beautiful handmade door
& cabinet hardware in
English Pewter.

We are proud to have established an enviable reputation for our design and quality over the last 20 years, Industry leaders and designers alike regularly use our products which are supplied throughout the UK and the rest of the world.

Each piece is made in our UK foundry using the latest technology alongside some highly skilled hands.

You will see some truly beautiful examples of work using Finesse Hardware throughout this publication kindly supplied by our customers.

www.finessedesign.com

Finesse is a trading name of DJH Group Ltd.

Naturally
Pewter
Naturally
Finesse

There are many materials & finishes available to the end user these day's when choosing door hardware. Pewter is still one of the most aesthetically beautiful materials, it has warmth, lustre and anti-corrosion properties and the fact we are able to recycle 100% of our products is unique in our industry. We are lucky enough to work with some truly talented designers and manufacturers who do a great job in showing the appeal of pewter in the home.

'It has been 20 years since we first started manufacturing our door & cabinet hardware range in Pewter and throughout that time we have created some beautiful designs, we will be launching new products throughout the next 12 months that will celebrate the advancement and skills we have achieved over this time'

Ian Smith - Design & Brand Manager.

Buying Door Knobs

IN THE BOX

Our Door knobs are packed in pairs unless a half set has been specifically ordered, each box contains fixing screws and an 8mm spindle which can be cut to size as required (Standard lever spindle size = door width + 40mm).

BACKSET OF LATCH/LOCK

Door knobs require a deeper setback than lever handles. The setback is the distance from the edge of the door to the centre of the hole in the Latch/Lock where the spindle passes through.

You must make sure you have enough space to fit 50% of the knob plus your fingers when the door is closed into the rebate, tight spacing may cause injury, this is important to check especially if you intend to fit to existing Locks/Latches.

LOCKS & LATCHES

Locks & Latches need to be ordered separately from your supplier to suit your door.

Our door knobs work on standard Mortise Locks/Latches

UNSPRUNG

All our Door knobs are unsprung relying on the spring inside your latch so we suggest you fit a heavy duty version, this will provide a much nicer opening motion.

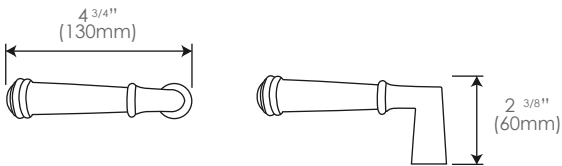

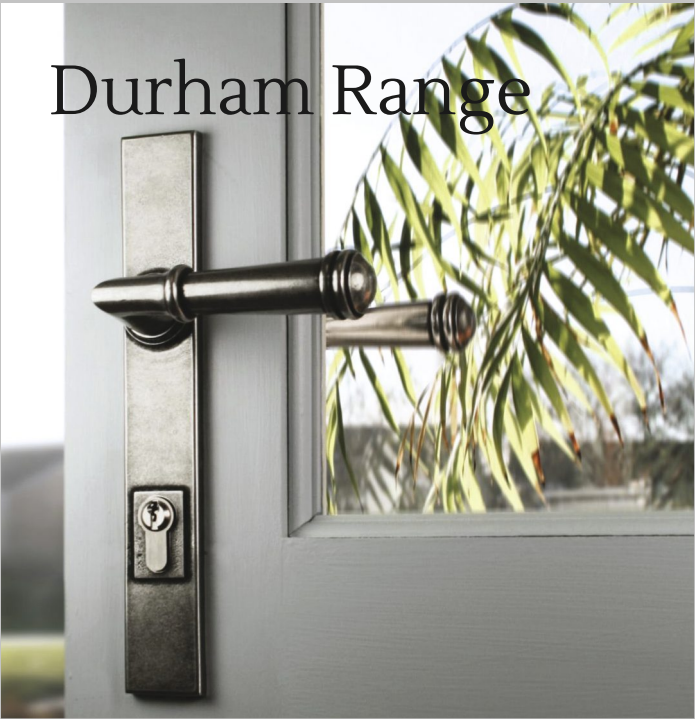

WHAT SIZE

We suggest you cut a paper disc out to put against your door the same size as the door knob you are thinking of buying, this will give you a good idea in relation to your door size.

Buying Lever Handles

IN THE BOX

Our Door levers are packed in pairs unless a half set has been specifically ordered, each box contains fixing screws and an 8mm spindle which can be cut to size if need be. (Standard lever requires spindle size trimmed to door width + 40mm)

MULTIPOINT PLATES

Levers supplied on Multipoint plates come unsprung to allow for lift up locking mechanism on this type of locking system, if unsure please ask your dealer/supplier for the correct lock information.

FIXED LEVERS

A fixed lever is sometimes required, in this instance please order a Taylor Spindle or a fixed plate when you order. Refer to price list or Website.

LOCKS & LATCHES

Locks & Latches need to be ordered separately from your supplier to suit your door. Our Levers work on standard Mortise Locks/Latches

UNSPRUNG/SPRUNG

All our Levers are sprung except when ordered on Multipoint Plates, when they are unsprung. Levers can be ordered unsprung if customer chooses, this must be stated when ordering.

MATERIAL

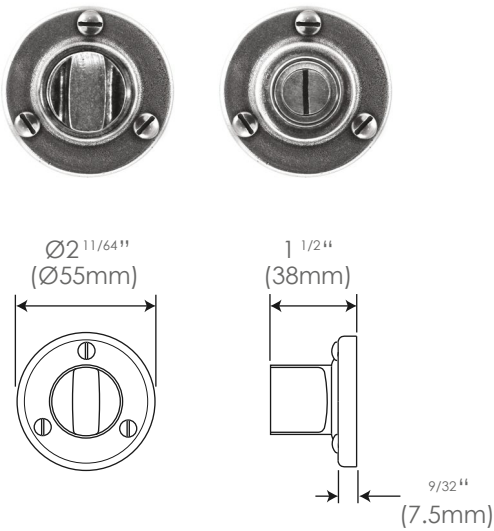

When choosing your levers, the only material we recommend for both Interior & Exterior use is our Solid Pewter. Wood & Leather products are only suited to interior use.

Crabtree Platinum components are also available to order from our preferred supplier ETC Electrical Supplies, Contact Will Wainwright T: 0121 5025133 E: will@etc-electrical.co.uk F: 0121 5667527. Delivery is typically 2 to 4 weeks or from your local electrical wholesaler of Crabtree products.

TECHNICAL

INFORMATION

FINISH – PEWTER WILL NOT RUST

Finesse products are made from 100% Pewter and has fantastic natural anti-corrosion properties, not to be confused with cheaper alternatives often described as Pewter 'Finish' 'Effect' or 'Patina' usually meaning coated or painted onto a cheap base metal. Genuine Pewter is an ageless lustrous metal. Its origins have great antiquity but today is made to the European standard EN6711 which guarantees a minimum 90% Tin (the fourth valuable metal in use in the world).

All Finesse internal parts and external fixings are made from brass or stainless steel to offer longevity and corrosion resistance.

A specially formulated lacquer is applied to all items intended for external use, this provides additional resistance to weathering and sunlight.

Genuine Pewter will over time take on a natural patina, the original finish can be maintained by following our simple maintenance guidelines.

MAINTENANCE CARE & CLEANING

With a minimum of care pewter will keep its original finish. Internally it can be washed with in warm soapy water or with a mild detergent solution, and dried with a soft cloth. Externally we recommend you clean your hardware every 3 to 6 months using the same regime above. If left longer and the pewter has darkened apply a light coat of non-abrasive metal polish i.e 'brasso' and buff vigorously when dry to a shine, repeat the process as required. Do not under any circumstances use solvent based household cleaners, polishes or aerosols as these will cause irreversible damage to the pewter surface.

All hardware of any material is at risk from a mix of moisture and lime dust in building site environments and should be protected as much as possible, ideally fitting only when construction is advanced and the site dry and clean. Oil internal moving parts as required when dry.

Leather products can be cleaned using a light coat of clear shoe cream and buffed.

Clear wax polish can be used to clean our genuine wood items as required.

INDUSTRY STANDARD ASSURANCE: BS EN 1670: 2007

Corrosion evaluated to BS EN 1670: grade 5 (480 hours) Building Hardware Resistance test. Pewter is 100% recyclable.

FIXINGS

All Finesse products come complete with all necessary fixings.

Cabinet Hardware:

- Cabinet Knobs/Cup/Pull/Handles: 25mm bolts supplied as standard.
- Bar Handles: 45mm snap-off bolts supplied (snap-off to size = door thickness + 5mm)
- Two Part Knobs: PCK001/003/004/011/FD223/289 – 45mm snap-off bolts (snap-off to size = door thickness + 5mm). Note if your cabinet doors are thicker than 19mm we recommend the use of our fixing screw extension (FSE), this further supports the two-part knob from over tightening in daily use.
- We recommend drilling a 5mm Ø pilot hole for all M4 fixings.

Door Hardware:

- Standard Door Levers: 25mm stainless steel dome head screws plated pewter. Solid Steel spindle 90mm x 8mm x 8mm (trim to size = door thickness + 40mm/ 20mm either side)
- Multipoint Door Levers: M5 x 90mm stainless steel c/s bolt plated pewter (Trim to size to fit = door thickness + 40mm). M5 Grub screws cone point (screw into the split spindle spline using the allen key provided). Multipoint door lever fixing bolts- M5x90mm stainless steel counter sunk bolts coloured to match pewter. (Trim to size = door thickness + 5mm).

Window Espagnolettes:

- Window to frame locking mechanism fixings: M5 x 50mm stainless steel c/s bolts plated pewter (trim to size).
- Locking/Security Mechanism: M4 Grub screw (lock or unlock with custom 'Finesse' allen key provided). Take care that the grub screw is fully unwound before closing the window to avoid marking the pewter mounting plate when operating the handle.
- Spindle cast into handle, 40mm long (7mm x 7mm), trim to size.

ACCOYA WOOD

Pewter will not react to materials such as Accoya due to its anti-rusting properties and our use of stainless steel fixings and brass bearings. We recommend you strictly follow the Accoya preparation guidelines of applying a fully factory applied finish or at least 3 layers of paint behind the hardware to provide a partial isolation barrier between the hardware and the wood. For more information about fitting hardware to Accoya refer to the essential coatings guide that is provided on their website.

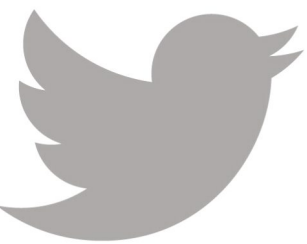

FITTING

Care should be taken when fitting Finesse Hardware. Make sure pilot holes are drilled before fitting screws, doors should be finished before adding your hardware to avoid paint and other finishes getting onto the product.

All Finesse Door Levers are supplied fully sprung.

Multipoint Levers and Door Knobs are by necessity supplied unsprung so pairing with a heavy duty double sprung latch or lock is recommended.

Finesse

Fine Pewter Hardware

Many of our customers use Accoya® so it was a natural progression to develop a range of hardware they could use with the confidence of knowing extensive testing was carried out to achieve the performance their customers require.

During the extensive testing our Grade 5 (480hr) finish proved to be the perfect partner for this material.

Mike Lewis of Accsys Technologies
manufacturer of Accoya® & tricoya wood
commented;

*"this high quality, all weather
range is completely suited
and works with Accoya"*

*"The testing undertaken has
demonstrated that their range can
give you confidence that not only
the Accoya® but also the
Ironmongery is a truly durable
choice for today's home"*
