## INNOVATIVE LEVER HANDLES BY KARCHER DESIGN

*KARCHER GmbH is a medium-sized family enterprise which has successfully distributed high-quality lever handles and accessories made from stainless steel, brass and zinc since 1991. The brand KARCHER DESIGN was able to position itself in the premium segment of the lever handle industry in Germany and western Europe. Our exclusive product range satisfies with its clear stylistic elements, comfortable aesthetics, fantastic colour schemes and primarily with its excellent quality.*

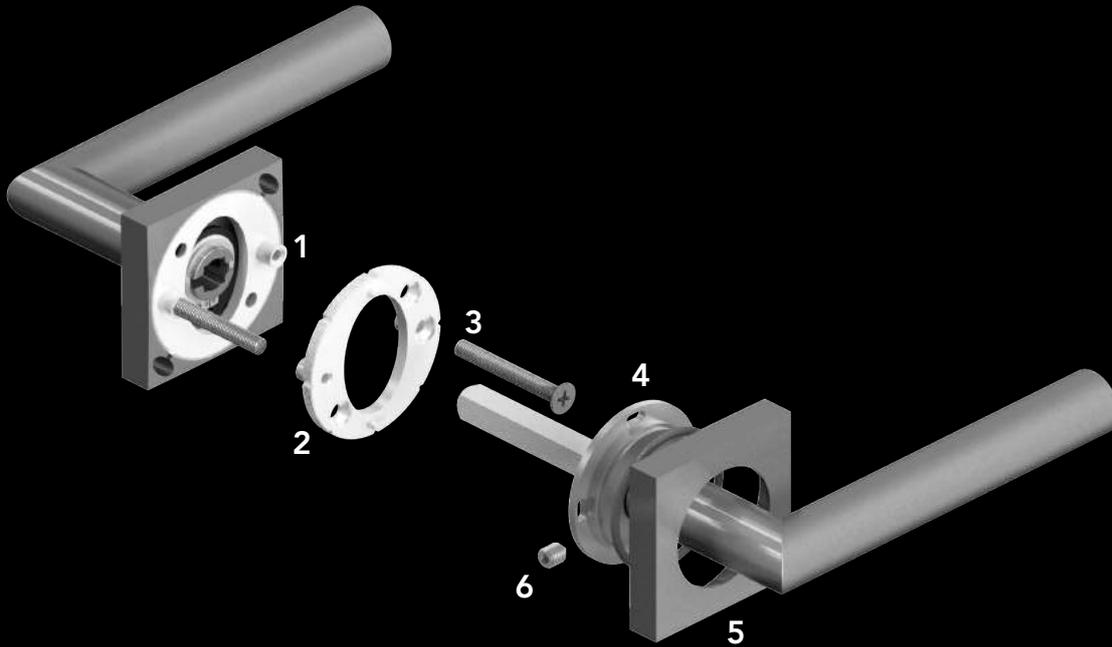

*We offer our lever handle models in combination with different rose types, such as round and square shaped. They are available as our three piece rose system or as our 3mm thick Plan Design. All our handle models are also offered on glass door locks, security lever sets and back plates as well as window handles.*

*Our products can be delivered in a wide-spectrum of different colours. In 2019 we won the Red Dot Design Award with our new colour, Cosmos Black. For more information about our products or to gain a deeper insight in our great product range visit us at [www.karcher-design.uk](http://www.karcher-design.uk)*

**Isabel Karcher & Jan Karcher**

# ENGINEERING OF THE THREE PIECE ROSE SYSTEM

- 1 - Solid mounting plate with 7mm support lugs and separate application on door
- 2 - Projecting lugs for precise mounting and correct alignment
- 3 - M4 fixing bolts
- 4 - Supported by plain bearing with heavy duty spring, and secured with circlip
- 5 - 2 springloaded stabilisers for precise positioning of threaded rose
- 6 - Grub screw for secure connection between handle and spindle

Karcher GmbH developed the 3-piece rose system to ensure simple, quick and safe installation. All door handles from the „Designs of Stainless Steel“ product line are available with the 3-pc. rose.

The 3 components consist of a mounting plate, an inner plate and a threaded rose cover. During installation, the mounting plate is first placed on the door and screwed in place. Then the inner plate with the door handle is placed on it. Finally, the rose cover with screw thread is screwed onto the inner plate.

## Bronzed edges

Grinding down the edges opens up a pleasant, bronze-coloured contour. This creates a great contrast to the smooth black.
